

EMC® Retrospect® Express HD 2.0

Data Protection for Your Home Computer

Backup and Recovery Software

When it comes to protecting your home computer, nothing beats EMC® Retrospect® Express HD. Built on award-winning technology that protects more than 10 million PCs worldwide, Retrospect backup and recovery software consistently takes top honors from the experts you trust.

Simple, Fast, Powerful

Retrospect Express HD protects your music, photos, videos, e-mail, games, tax returns, schoolwork, computer settings, important documents—everything—by automatically backing up your PC to any available hard drive. Other backup software requires time-consuming full backups every week. Retrospect's award-winning technology captures just new or changed data—forever. Retrospect is fast and efficient!

Start your first backup in minutes

With Retrospect Express HD, protecting your Windows PC is easy and quick. A wizard guides you through three simple steps: choose what to protect, select a hard drive to store your backups, and set a schedule. That's it! Retrospect protects your valuable information automatically. Schedule your backups at a time convenient for you or protect information instantly with a click of the BACKUP button. To guard against loss of a backup drive, use two external drives and rotate them. No matter which drive you use, Retrospect quickly adds new or changed data. Restores remain fast and easy.

Smart Restores™

Retrospect rapidly restores a file, a folder, or your entire hard drive. Unlike other software, Retrospect won't return unwanted files and folders—just the data you need. If you accidentally delete a file, simply select a previous backup and locate the missing file. If a virus or new software installation wreaks havoc on your PC, don't panic. Retrospect returns your entire computer to its exact state at a prior point in time. You don't need to re-install applications, download updates, and personalize your settings. Retrospect does it all.

2005

Consumers Digest

"This is one powerful program...well designed...easy to use."

Retrospect 7.5 Professional Edition

2005, 2006

PC World

Top ranked backup software and named among "100 Best Products" in 2006.

EMC Retrospect

Protects over 10 million PCs worldwide.

EMC® Retrospect® Express HD 2.0

Simple, yet powerful

Installs in minutes	Begin your first backup in three quick steps.
User-friendly wizards	Retrospect's simple point-and-click interface makes backups and restores fast and easy.
Instant or scheduled backups	Back up your PC automatically on a daily schedule. Need immediate protection? Back up instantly with a click of the BACKUP button.
Automatic Retrospect software updates	Retrospect regularly checks for its software updates when you connect to the Web and notifies you if they are available for download and installation.

Secure, reliable protection

Protects a desktop or notebook	Retrospect Express HD runs on a Windows desktop or notebook computer.
Protects open files on Windows XP	Protect files that are open and in use on a PC running Windows XP, including files in use by applications such as Microsoft Outlook.
Back up to internal or external disk	Back up to internal or external hard drives including USB, FireWire (IEEE 1394), eSATA, or networked hard drives.
Simple onsite/offsite media rotation	To guard against hard drive failure or a disaster (fire, water, storm), purchase two external hard drives, create two sets of backup data, and rotate the drives offsite. Retrospect quickly updates the drive that is rotated onsite and tracks everything for you.
Compress data	Reduce the size of backed up data to conserve space on your backup hard drive and maximize its capacity.
Easy data copying	Make exact copies of files, folders, or entire drives to another drive in the same file format. Retrospect's intelligent copy capability scans the source and destination so that only missing files are copied.

Fast backups and Smart Restores™

Backup flexibility	Back up your entire computer (recommended) or choose the files and folders you want to protect. Data filters also allow you to limit backups to certain types of data, such as music, videos, pictures, Microsoft Office documents, and systems and applications.
Patented Progressive Incremental technology	Retrospect rapidly compiles a complete list of files on your computer prior to every backup and then compares the list to your backup media. Only new or changed data is backed up. Other backup applications require a complex series of full, incremental, and differential backups. With Retrospect you can perform fast incremental backups forever, saving time, money, and aggravation.
Point-in-time restores with unparalleled accuracy	Use the Retrospect Restore Wizard to quickly recover files, folders, or your entire computer. With Retrospect's Smart Restore™ technology you choose a point in time. In one pass of your backup media, Retrospect selects and restores the exact data you need without returning unwanted files that were previously deleted, moved, or renamed. Other software performs time-consuming restores of multiple backups, cluttering your computer with unwanted files.
Automatic grooming of disk backups	Remove older backups on disk automatically to ensure sufficient space for new backups. Simply turn on Retrospect's unique data grooming feature and specify the number of backups you want to keep on your computer or an external disk. Retrospect takes care of the rest.
Backup data and media verification	To avoid costly surprises, Retrospect quickly scans the backup hard drive to make sure data has been copied correctly.
Powerful search capabilities	Find files on your backup hard drive fast using search criteria. Restore them to their original location or a new location. Recover a single version or all previously backed up versions of a file.
Clear error notification	Make sure that backups are being performed as planned. Receive easy-to-understand alert messages so you can take corrective action to resolve any backup errors.
